

Hemant Sharma

Senior DevOps Engineer

Gurgaon, Haryana | +91-8440032283 | mr.hemantksharma@gmail.com | [Hemant Sharma](#) | [Linkedin](#)

SUMMARY

Results-driven Cloud Engineer and Senior DevOps Engineer with 4.5+ years of experience across HCL Technologies and Forvia Hella, specializing in cloud infrastructure, Kubernetes platform operations, DevOps automation, security optimization, and enterprise IT execution. Proven expertise in managing scalable, cost-effective cloud and container platforms across AWS, Azure, on-prem RKE2, and Azure AKS environments. Skilled in Rancher, ArgoCD, Helm, Terraform, Docker, Linux, Bash, and Python, with strong experience in troubleshooting complex production issues, improving platform reliability, and collaborating with cross-functional teams to deliver secure, high-performance infrastructure.

EXPERIENCE

SENIOR DEVOPS ENGINEER | FORVIA HELLA | DEC 2025 – PRESENT

A global automotive technology organization focused on enterprise platform reliability and modern infrastructure operations

- Administered Rancher for centralized multi-cluster lifecycle management, cluster monitoring, access control and Kubernetes operations across enterprise environments and deployed ArgoCD for application deployment.
- Performed production Kubernetes troubleshooting involving Calico networking, Ingress, Persistent Volumes, Storage Classes, StatefulSets, Deployments, Services, GitLab Runner workloads, and cluster networking issues.
- Configured and maintained Harbor & Nexus Container Registry, Helm repositories, image management workflows, and secure container deployment pipelines.
- Configured enterprise AI platform initiatives by deploying and troubleshooting Kagent, Azure OpenAI integration.
- Deployed and managed highly available (HA) Kubernetes applications, including Metaphactory and Astra, ensuring high availability, scalability, and reliable production operations.
- Configured NVIDIA GPU Operator and implemented GPU time-slicing on Kubernetes clusters to optimize GPU resource utilization and enable efficient multi-workload GPU sharing for AI/ML applications.
- Architected and automated end-to-end AKS cluster deployment through Azure DevOps CI/CD pipelines and terraform, reducing manual effort and ensuring standardized infrastructure provisioning across environments.
- Automated Kubernetes RBAC configuration through Azure DevOps pipelines, streamlining the deployment of Cluster-Roles and ClusterRoleBindings while strengthening security governance and access management.
- Implemented end-to-end Kubernetes monitoring, observability, logging, and security solutions using Prometheus, Grafana, Jaeger, Kubernetes Audit Logs, NeuVector, and Falco to enhance infrastructure visibility, runtime security, compliance, vulnerability management, intrusion detection, and proactive incident response.

CLOUD ENGINEER | HCL-TECH | FEB 2022 – OCT 2025

A leading global technology company focusing on IT services and solutions

- Supervised complex IT projects, ensuring timely delivery, functionality, and cost-efficiency, reducing project completion time by 20%.
- Delivered cloud training and support to 100+ end-users, increasing cloud adoption by 35%.
- Troubleshoot and resolved multi-cloud infrastructure issues across AWS and Azure to maintain uptime and optimize performance.
- Designed and implemented secure AWS Landing Zone environments using Control Tower and Account Factory to automate account provisioning and baseline configuration.
- Standardized security guardrails, network setup, IAM policies, and automation workflows, reducing manual onboarding efforts by 60%.
- Containerized microservices by developing Docker images and automating builds, testing, and deployments in CI/CD pipelines, reducing deployment time by 45%.
- Designed cloud environments using AWS, GCP, Terraform, Ansible, Git, GitHub, and GitHub Actions, reducing deployment times by 25% and increasing infrastructure stability by 30%.
- Designed and tested disaster recovery plans, enhancing business continuity and reducing potential downtime by 50%.
- Identified and implemented automation use cases, achieving a 20% reduction in operational costs.
- Automated resource cleanup and optimization using AWS Lambda and shell scripts, saving over \$160,000 annually.
- Created dashboards to track resource utilization and system health, improving uptime by 20%.

Education

B.TECH | MODERN INSTITUTE OF TECHNOLOGY & RESEARCH CENTER, RTU | **AUG 2015 – MAY 2019**

Skills & Abilities

- **Cloud Platforms:** AWS, Azure, GCP
- **Infrastructure as Code (IaC):** Terraform, Ansible
- **DevOps & Automation:** CI/CD, Git, GitHub, GitHub Actions, Jenkins, Docker, Kubernetes Lambda, Control Tower, Helm, ArgoCD
- **Monitoring & Management:** CloudWatch, WIZ, ServiceNow, Jira
- **Operating Systems:** Linux, Windows Server

CERTIFICATIONS

- **AWS Certified** - Cloud Practitioner
- **AWS Certified** - SysOps Administrator – Associate
- **AWS Certified** - Solutions Architect – Associate
- **Google Certified** - Associate Cloud Engineer
- **Microsoft Certified** - Azure Fundamentals (AZ-900)
